1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the specification, the first sentence (as provided in the transmittal filed 6/8/01) was amended to update the status of the parent application, as follows:

This application is a continuation of application Serial No. 08/873,999, filed June 12, 1997 entitled "METHOD AND DEVICE FOR GLUCOSE CONCENTRATION MEASUREMENT WITH SPECIAL ATTENTION TO BLOOD GLUCOSE DETERMINATIONS", now U.S. Patent No. 6,246,893.

2. The following is an examiner's statement of reasons for allowance: The rejection of claims 44 - 59 based on statutory-type double patenting is hereby withdrawn in view of the remarks and exhibits filed 28 December 2004.

Applicant cites several references that measure glucose concentrations in subjects by determining optical rotation of a polarized measurement beam. In particular, Hutchinson (USPN 5,009,230), Cote et al. (USPN 5,209,231), Buchert (USPN 5,383,452), and Kuhls (USPN 5,687,721) are noted. None of the prior art, either alone or in combination, teaches a method of measuring glucose concentration by analyzing a polarized measurement beam that is introduced into an anterior chamber of an eye such that it is refracted within the anterior chamber, impinges on a reflective

Art Unit: 3736

interior surface, is reflected therefrom, and then exits the anterior chamber approximately collinear with the beam immediately before the point at which it is introduced into the anterior chamber, in combination with the other claimed steps. Further, the prior art does not teach or suggest a system to implement such a method. In addition, the prior art does not teach or suggest a method of measuring glucose concentration from either a subject's eye or skin, that includes a step of simultaneously applying a DC signal and an AC signal to a polarization modulator to extinguish any light passing from an analyzer to a detector, by shifting the DC signal to a value that produces a null in the AC component of an output signal produced by the detector, in combination with the other claimed steps.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric F Winakur whose telephone number is 571/272-4736. The examiner can normally be reached on M-Th, 7:30-5; alternate Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Max Hindenburg can be reached on 571/272-4726. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system.
